PRESS RELEASE

Teréga introduces co-working

New workspaces are being introduced at Teréga. A new architectural style is gradually being introduced at the company's headquarters, the Espace Volta in Pau, which is transforming office spaces to improve the quality of the workplace by introducing flexibility and collaboration. These co-working spaces are part of the "working differently" initiative and they allow us to look at a new way of working, the watchwords being: cross-functionality, communication, sharing, and ergonomics...

2018 thus witnessed the completion of a project at Teréga: its first co-working workspace, called "degree 339", a name that refers to its position in the circular Espace Volta building.

With the support of the Pau-based agency Bliss, the Teréga General Resources Department was responsible for this project. *"Teréga is an innovative company, always on the lookout for the latest innovations. Co-working seems to us to be perfectly in line with our philosophy. It is important to stress that the realisation and success of this project are above all due to the commitment of the team,"* says Jean-Philippe Donato, Director of Teréga's General Resources Department.

Before arriving at this layout, we mapped out how employees work. First, their needs were identified: whether they worked up, sitting down, alone, organizing meetings, making calls; whether they required privacy, screens, etc. Based on this analysis, work areas were established in which the appropriate type of furniture for these work practices could then be determined.

Spaces were thus created that allow people to concentrate, collaborate, create or recharge their batteries.

Teréga's employees work in pleasant, comfortable, stylish and innovative spaces that fully meet their needs and promote communication.

In addition to this new arrangement, Teréga is committed to supporting changes in its operating methods and to introducing a new approach to work in order to achieve ever greater levels of innovation and efficiency in its projects through the promotion

of well-being at work. New spaces are already being created or are under consideration for the Espace Volta in Pau, but also for the whole of Teréga's area of operations in the Southwest of France.

Espace Volta – under the spotlight

In 2016, Teréga's new headquarters building, the Espace Volta, was awarded the AMO (Architects and Project Managers prize). The project was beautifully executed in terms of aesthetics, architecture, quality and also in terms of meeting environmental objectives. Its circular shape and the materials used, such as concrete, from the beginning, marked it out as distinctive.

About Teréga

Located in the Southwest of France, the crossroads of Europe's major gas flows, Teréga has been developing unique its expertise in the development of gas transmission and storage infrastructure for more than 70 years and is now designing innovative solutions to meet the major energy challenges in France and Europe. The company, historically established in the Southwest of France, operates over 5,000 km of pipelines and 2 underground storage reservoirs representing 16% of the French gas transport network and 24% of national storage capacities. In 2017, the company generated revenues of €471 million and had over 580 employees.
